

KADIMA

High Performance
Color Coded f/g Diamond Burs

**a Precision Instrument
for Today's Professional!**

TOP QUALITY

We are as serious about the quality of our Diamond Burs as you are. KADIMA Diamond burs meet our rigid internal quality control standards.

REDUCE CHAIR-TIME

KADIMA Diamond burs are specially designed to cut much faster than other burs on the market, thus reducing patient's trauma as well as chair-time.

LONGER LASTING

Natural diamond particles are attached to a perfectly concentric stainless steel shank. These particles do not break down, making this bur a longer lasting precision tool.

Test it for yourself... Compare this diamond with another brand, using them on an extracted tooth. You will feel the legendary speed of the KADIMA burs. Take a magnifying glass and examine both burs after use. You will find that the KADIMA will have more diamond particles still intact and still attached.

100% SATISFACTION GUARANTEE

Try any 2 KADIMA Diamonds. If you are not 100% satisfied with their performance, just call us within 30 days from the date of invoice. We'll pick up the unused burs at our expense and mail you a full refund.

ECONOMICAL

KADIMA Diamond burs routinely outperform all other brands, including the most expensive.
